---> Comment Text :

1 I am writing to urge the Department of Energy to reject the  
Yucca Mountain proposal, which would make it a storage site for  
high-level nuclear waste.

Not only is Yucca Mountain located in a region that is earthquake-  
prone, but water also flows beneath the mountain, which could  
infiltrate the waste containers, corrode them, and carry  
radioactive waste into the groundwater. This area's residents are  
highly dependent on this groundwater, which could in essence be  
filled with radioactive waste. Earthquakes could also damage the  
waste containers. This does not resemble a sound plan for the  
storage of toxic waste.

- 2 [ Instead of concentrating on nuclear energy and thus having this huge problem with the storage of radioactive waste, the Department of Energy should be spending more time and money investing in renewable, non-toxic energy sources, such as hydrogen, solar, and wind power. ]

Please REJECT the Yucca Mountain Nuclear Waste Storage Proposal.  
It is not a sound site for the storage of radioactive waste.

Thank you for your time.

Sincerely,

Erin M. Moore
